FEEDBACK REPORT

ABILITY

REPORT STRUCTURE

The Critical Reasoning Test Battery assesses your capacity (a composite of speed and accuracy) to arrive at logical decisions based on complex information. This incorporates the ability to: weigh evidence logically; identify trends in data; isolate the key points in an argument; understand complex arguments; assimilate evidence; process information quickly; make well-informed business decisions and solve problems effectively.

THE FEEDBACK REPORT

The Feedback Report provides a detailed breakdown of your performance across the sub-scales in the following sections:

1. Verbal Critical Reasoning

2. Numerical Critical Reasoning

PLEASE NOTE

The following report provides a summary of your performance on the tests which you have recently completed. The tests were used to help in the assessment of your personal qualities and abilities. It is important for you to note that these tests only provide an approximate description of your abilities. In addition, these tests only form part of the selection process and are typically considered alongside such factors as past performance, education, training, experience, motivation etc. All of your results will be treated in the strictest of confidence. The use of these tests is restricted to professionals who have been trained in testing and who will be able to interpret the significance of your profile within a work setting.

RESULTS

Verbal Critical Reasoning

The verbal component of the Critical Reasoning Test measures an individual's ability to reason using words, and draw inferences and logical conclusions from them. This includes both an understanding of the meaning of words and the relationships between them. The results have been compared to a high scoring group of graduate or equivalent ability.

Your performance on the verbal component of this test places you towards the higher end of the typical range achieved by other graduates and managers. Such a score suggests that your ability to critically evaluate written arguments is as good as, or slightly better than, that of most typical graduate calibre personnel. You show somewhat more ability than many graduates to correctly deduce the logical consequences of a given argument and accurately perceive the subtle shades of meaning found in complex prose. Consequently, you should be able to understand complicated written instructions and reports with a fair degree of ease and will be able to explain these ideas in a relatively clear way.

Numerical Critical Reasoning

The numerical component of the Critical Reasoning Test measures the individual's ability to use and manipulate numbers in a logical way. This includes both an understanding of numbers and the relationships between them.

Your performance on the numerical component of this test falls just below the typical range of scores achieved by the reference group. This suggests that you may not be as efficient as many graduate calibre personnel at interpreting numerical information which is presented in tabular form. In addition, you may have some difficulty in accurately drawing logical conclusions and inferences from such sets of data. While you should be able to cope with the demands of many jobs which require dealing with numerical information and making decisions on the basis of such data, you may not be as efficient as most graduate calibre staff in this area.
