FEEDBACK REPORT

ABILITY

REPORT STRUCTURE

The Internet Reasoning Test assesses your capacity (a composite of speed and accuracy) to perceive logical patterns and relationships in new material you have not previously encountered, and deduce the logical consequences of these (i.e. logical deductive reasoning). This incorporates the ability to: learn and understand complex new material; use logic to develop arguments that are rational and well-reasoned; deduce the logical consequences of a given set of rules, assumptions or relationships.

THE FEEDBACK REPORT

The Feedback Report provides a detailed breakdown of your performance across the sub-scales in the following sections:

1. Verbal Reasoning

2. Numerical Reasoning

3. Abstract Reasoning

PLEASE NOTE

The following report provides a summary of your performance on the tests which you have recently completed. The tests were used to help in the assessment of your personal qualities and abilities. It is important for you to note that these tests only provide an approximate description of your abilities. In addition, these tests only form part of the selection process and are typically considered alongside such factors as past performance, education, training, experience, motivation etc. All of your results will be treated in the strictest of confidence. The use of these tests is restricted to professionals who have been trained in testing and who will be able to interpret the significance of your profile within a work setting.

RESULTS

VERBAL REASONING

The verbal component of the Internet Reasoning Test measures an individual's ability to reason using words, and draw inferences and logical conclusions from them. This includes both an understanding of the meaning of words and the relationships between them. The results have been compared to a high scoring group of graduate or equivalent ability.

You performed as well as most others on the verbal component of this test. Your score is typical of the comparison group suggesting that your verbal reasoning ability is as strong as most others. While you will be able to understand instructions and explanations without too much difficulty it may take you a little time to fully appreciate the logic underlying complex arguments. As able as most to use words in a logical, rational way you should be able to explain concepts you are familiar with a fair degree of clarity.

NUMERICAL REASONING

The numerical component of the Internet Reasoning Test measures the individual's ability to use and manipulate numbers in a logical way. This includes both an understanding of numbers and the relationships between them.

Your performance on the numerical component of this test falls well below the typical range achieved by the reference group. This suggests that you may have some difficulty understanding numerical concepts and may not be particularly comfortable when dealing with numerical problems. You may therefore be expected to take longer than most people to understand such ideas. You will require focused training in order to acquire new numerical skills and may have difficulty understanding the fundamental numerical principles which underlie such skills.

ABSTRACT REASONING

The abstract component of the Internet Reasoning Test is a non-verbal test of ability which measures reasoning power without drawing on verbal or numerical knowledge.

Your score on the abstract component of this test indicates that you have performed just below the typical range of scores achieved by the reference group. Such a level of abstract reasoning ability will enable you to grasp new concepts outside of your previous experience although it may take you a while to fully appreciate subtle ideas. You are likely to benefit most from a structured approach to training and instruction.
